

## **Four-Year Plan of Promotion for Wind Power**

### **A. Goal**

Based on current achievement, MOEA plans to promote wind power development according to the “onshore ahead of offshore” principle.

### **B. Onshore**

MOEA plans to promote onshore wind power with the strategy of “Excellent wind farms first, potential wind farms afterwards”. The target of accumulated capacity by 2020 814 MW.

### **C. Offshore**

In reference to international experiences, the idea of offshore wind promotion is “shallow water ahead of deep water” and “Demonstration first, and then Zones of Potential, and finally Zonal Development”. The target of accumulated capacity is 520 MW by 2020 and 3 GW by 2025.

#### **(a) Demonstration Incentive Program (DIP)**

MOEA promulgated “Demonstration Incentive Program for Offshore Wind” on July 3<sup>rd</sup>, 2012. The Government has selected 3 awarded winners, including 2 from private sectors (Fuhai and Formosa) and 1 from state-owned company (Taipower). They will set up successful examples for following developers.

#### **(b) Zone Application for Planning (ZAP)**

BOE promulgated “Directions of Zone Application for Planning” on July 2<sup>nd</sup>, 2015, along with 36 Zones of Potential for reference of the developers. ZAP has been open for application since October 2<sup>nd</sup>, 2015.

#### **(c) Zonal Development (ZD)**

MOEA plans to promote marine spatial planning for integration of national resources to promote installations of offshore wind power and development of domestic industry. Zonal Development will facilitate both green power generation as well as establishment of local supply chain, so that the 3 GW target can be fulfilled by 2025.
